

## WHY CHOOSE A SECURITY ALARM SYSTEM ?

Rapid development has unfortunate side effects. As the gap between rich and poor widens, the threat of burglary becomes an increasing reality.

Laos has seen a sharp rise in the number of residential break-ins. Surprisingly, incidents occur just as often when families are sleeping as when they are away. While some entrust guards or security cameras with their protection, a growing number of cases suggest they do not always perform when required. Without an effective system of detection and alert the security of your loved ones can be easily compromised.

Unlike other security options, alarm systems are intelligent, reliable and never sleep. They provide families with the early warning they need and create a powerful audible deterrent to shock intruders and send them running. Alarm monitoring allows quick and reliable communication of events in real time. Relevant people can be contacted and local police dispatched to the scene when required.

A common misconception is that alarm systems are unreliable and complicated to use. At EYETECH we have developed systems so simple and user-friendly they can even be operated by children. Combining the very latest in technology with experienced and professional installation we ensure that alarms are only generated when they should be. Now even reliable outdoor detection is possible.

Wireless systems are quick to install and can be easily moved when you do. As far as cost is concerned, the savings compared to other options may come as a big surprise. For expatriate staff on short-term contracts, monthly rental is an attractive option. EYETECH has an appropriate solution for every family, every property and every budget.

As our many customers will testify, alarm systems provide a feeling of total security and protection that is impossible to beat. Call us today to find out more and arrange a free on-site consultation.
